

WARGAME

EUROPEAN ESCALATION

Wargame: European Escalation, the new real time strategy game from **Eugen Systems**, a specialist of the genre and developer of the critically-lauded **Act of War: Direct Action**, and more recently **R.U.S.E.™**.

Wargame: European Escalation is built around depth and reflection, the key elements of classic wargames. Above solid foundations, Eugen Systems builds an impressive list of features and enhancements in order to provide a unique and innovative gaming experience to all real-time strategy fans.

Wargame: European Escalation features intense real-time battles, stunning graphics, and the amazing **IRISZOOM™** system, which allows a continuous zoom from a global view of the map to the heart of the action. With real strategic gameplay, rich content, integration of EugenNet© and its numerous online services, **Wargame: European Escalation** will unite all the world's biggest strategy fans.

Set in the **rarely explored period of 1975-1985**, **Wargame: European Escalation** pits **NATO (USA and Western Europe) against the Warsaw Pact (Soviet and Eastern European countries) in battles that explore** "what could have been." The specter of nuclear warfare loomed large over the real Cold War, but this catastrophic outcome was the ultimate last resort as everyone knew that the first one to start nuclear hostilities would end up wiped out just the same. Large, armored offensives through Europe would certainly have been the core of this hypothetical war; and this is what the **game's explosive campaign** takes you through!

- Lead on huge maps the most intense of large-scale battles, involving hundreds of units ranging from armored tanks, helicopters, infantry, logistic vehicles, etc...
- In-depth, realistic strategy taking into account many parameters, such as ammunition, fuel, supply lines...
- A modern, realistic setting, taking you through an explosive solo campaign revisiting the Cold War as it could have been if things had heated up.
- A big multiplayer mode, served by the numerous EugenNet© services integrated in the game.
